Subject: RE: LPRSA - CSTAG - couple of heads up items

Jennifer,

In the outline for the memo there are some sections where you have identified the amount of information you anticipate (e.g. no more than X pages). Do you have a feel for how much detail you want in some of the other sections?

I also had a similar question for the meeting presentation. Will it follow the same outline? Should we plan on a total of one hour for the briefing presentation based on the current agenda, with a similar distribution of the topics?

For the interim remedy presentation we should plan on the 45 minutes from the agenda, correct?

Thanks,

James

Attached is a draft outline with some notes about what I would like CDM/HDR to start working on in preparation for the CSTAG meeting. I've made the font in red with the pieces I would like you guys to work on.

I have also attached a 2011 memo that Stephanie and/or Alice must have prepared for a CSTAG meeting they had on LPRSA. There are now clearly defined topics to cover (as per the attachment from the 12/13 email below) that doesn't exactly line up with what is the attached 2011 memo. I'm providing it though as background and maybe there are some pieces we can grab from it.

We can talk more about this Monday – Not expecting you guys to work on this today or tomorrow. Just thought it would be helpful for you to have this on hand when we talk then.

Subject: LPRSA - CSTAG - couple of heads up items

Hey guys – CSTAG confirmed the meeting days. Those are Wednesday, 2/28 and Thursday, 3/1. Please forward the meeting invite to any folks I may have missed (Kristen C. and Dan C.)

There are a bunch more details that need to be worked out, but one of the items I'll be looking for assistance on is pulling together our info into a package on the follow topics. This will need to be submitted to CSTAG members no later than two weeks in advance of the meeting. We can chat more about format and time frame in the near future – this is mostly just a heads up.

1. A summary of all available contaminant data in sediment (surface and at depth), biota, and surface water
2. Full description of the CSM
3. Info on existing and potential eco and HH risks
4. Info on site conditions most conducive to dredging, capping, in-situ amendments, enhanced natural recovery (ENR), or monitored natural recovery (MNR)
5. Info on sediment deposition and erosion
6. Info on on-going releases and uncontrolled sources, including background contaminant concentrations in appropriate media.

I've also attached our initial draft schedule and an overview of CSTAG process and procedures for context.
